

## **DermaScan Screening**

### ***Have you had too much fun in the sun?***

#### **A. What is DermaScan or DermaView Screening?**

The DermaScan magnifies the image of your face using a black light. This black light will highlight the harmful effects of overexposure from the sun's UV rays – Sun Damage!

#### **B. What do participants actually see when they view their face in the DermaScan?**

They will see their face mirrored back at them under the black light. They will see various levels of florescent hues, depending on the oily, dry and sun damaged areas of their face. This is NOT a skin cancer screening.

#### **C. What does the technician say to the participant?**

The technician will alert them to the areas of face that are oily, dry or sun damaged. The technician will be explaining the differences in the sun's damaging rays, and the importance of wearing sun screen. They will also be encouraged to avoid the sun for long periods of time, drink plenty of water, and see their dermatologist for an annual skin exam.

#### **1. How do I order this service?**
